Ethylene-Propylene copolymers are produced by poly-
merization of mixtures of the olefins with catalysts
made from aluminum tri-n-hexyl and vanadium oxy-
chloride. The products are true copolymers with
rubbery properties characteristic of an unvulcanized
elastomer. Polymers are separated by a complicated
fractionation scheme involving acetone, ether, hexane
and heptane. Composition of the copolymer is deter-

v. 40, no. 4, p. 287-289.

The method for the synthesis is based on the reaction
between aromatic compounds and chromium hexacar-
bonyl according to the equation

In this manner aromatic-chromium-tricarbonyl com-
pounds were prepared containing benzene, toluene,
o-, m-, p-xylene, symmetrical trimethylbenzene,
tetrahydronaphthalene, chlorobenzene, anisole, benzyl
alcohol and methylbenzoate. The compounds, which
contain aromatic nuclei linked to the chromium with π
bonds, are crystalline yellow solids, sublimable at
60° to 100°C under a vacuum of 10^{-2} mm Hg. and are
monomeric by cryoscopy in benzene.
